Introduction to Repsol’s Transition Finance Strategy

Investors Presentation
June 2021
This document contains statements that Repsol believes constitute forward-looking statements such as, among others, the financial and operating figures for the 2020 fiscal year. These forward-looking statements may include statements regarding the intent, belief, or current expectations of Repsol and its management, including statements with respect to trends affecting Repsol’s financial condition, financial ratios, results of operations, business, strategy, geographic concentration, production volume and reserves, capital expenditures, costs savings, investments and dividend payout policies. These forward-looking statements may also include assumptions regarding future economic and other conditions, such as future crude oil and other prices, refining and marketing margins and exchange rates and are generally identified by the words “expects”, “anticipates”, “forecasts”, “believes”, estimated”, “notices” and similar expressions. These statements are not guarantees of future performance, prices, margins, exchange rates or other events and are subject to material risks, uncertainties, changes and other factors which may be beyond Repsol’s control or may be difficult to predict. Within those risks are those factors and circumstances described in the filings made by Repsol and its affiliates with the Comisión Nacional del Mercado de Valores en Spain and with any other supervisory authority of those markets where the securities issued by Repsol and/or its affiliates are listed.

Repsol does not undertake to publicly update or revise these forward-looking statements even if experience or future changes make it clear that the projected performance, conditions or events expressed or implied therein will not be realized.

This document mentions resources which do not constitute proved reserves and will be recognized as such when they comply with the formal conditions required by the system “SPE/WPC/AAPG/SPEE Petroleum Resources Management System” (SPE-PRMS) (SPE – Society of Petroleum Engineers).

In October 2015, the European Securities Markets Authority (ESMA) published its Guidelines on Alternative Performance Measures (APMs). The guidelines apply to regulated information published on or after 3 July 2016. The information and breakdowns relative to the APMs used in this presentation are updated quarterly on Repsol’s website.

This document does not constitute an offer or invitation to purchase or subscribe shares, pursuant to the provisions of the Royal Legislative Decree 4/2015 of the 23rd of October approving the recast text of the Spanish Securities Market Law and its implementing regulations. In addition, this document does not constitute an offer to purchase, sell, or exchange, neither a request for an offer of purchase, sale or exchange of securities in any other jurisdiction.

The information contained in the document has not been verified or revised by the Auditors of Repsol.
Agenda

1. Strategic Plan and Energy Transition Pathway
2. Transition Financing Framework
3. Appendix

Appendix A: Details of Eligibility Criteria for Green Projects and Transition Projects
Appendix B: Repsol Financial Position
Strategic Plan and Energy Transition Pathway
Ambitious transformation journey to thrive in Energy Transition
Path to Repsol 2030

De-carbonize the portfolio

Profitable
FCF growth
Advantaged transformation

Four verticals
Upstream
Industrial
Customer-centric
Low Carbon Generation

New operating model
New partnerships
Value crystallization

Towards Net Zero emissions
Leading investor proposition
Repsol 2030: A more sustainable, balanced and profitable company

Transforming the company's portfolio

Strong cash-flow growth

2030 Repsol's Low Carbon business: ~40% of CE

Growing 2030 FCF well above 2025

1. Increase in low carbon CE through investments in low carbon generation, new industrial low carbon platforms (circularity, H2 & e-fuels, etc.), decarbonization through efficiency initiatives, e-mobility, and value-added services, among others
2. In homogeneous price basis @$/50/bbl & $2.5 HH

Note: CE of RES considering consolidation by the proportional method. Capital employed figures not including Corporation (€2 B in 2019)
Repsol: Pioneering commitment with decarbonization goals

First O&G to target Net Zero emissions
Committed in December 2019, now increasing our ambition

Carbon Intensity Indicator\(^1\) reduction target \([\text{gCO}_2/\text{MJ}]\)

2025
2030

64 kt/y
H₂ production³
192 kt/y

Repsol to become an active H₂ player
across uses, and a strategic partner to develop the Government ambition

1. Steam reformer
2. Repsol’s hydrogen ambition conditioned to access to regulatory changes and availability of EU recovery funds Plan
3. Considering a ratio of 0.02 t/h per MW and 8,000 hours of operation per year based on Repsol’s past projects
Repsol becoming an advantaged producer

Sustainable biofuels

Repsol best positioned for sustainable biofuels production

- Already a leading biofuels producer, and first biofuels marketer in Spain (66% share)
- Leveraging our tier one industrial sites to produce biofuels in own facilities through modifications of current units
  - Lower Capex: <€500/t in existing plants (vs. >€1000/t of peer's new plants)
- Average projects IRR >15%
- Positioning, scale and relevance of our industrial hubs key to secure feedstock

Reaching > 2 Mta of sustainable biofuels in 2030

<table>
<thead>
<tr>
<th>Sustainable biofuels gross production (Mta)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current Capacity</td>
</tr>
<tr>
<td>0.7</td>
</tr>
</tbody>
</table>

Updated ambition: from 600kt of HVO to >2 Mt of sustainable biofuels

With a multi-technology and raw material approach

Use of wastes as feedstock

- >65% of biofuels produced from waste by 2030 (up to 100% potentially to satisfy market or regulation demands)
- Large availability of required feedstock with flexibility between alternatives
- ~4 Mt of waste to be used as raw materials by 2030

Repsol with a leading sustainable biofuels ambition

1. Gross volumes. 2. Expected capacity of sustainable biofuels by 2025 includes: 700 kt/y from current existing capacity, 250 kt/y capacity from the advanced biofuels plant in Cartagena, 130 kt/y capacity from a gasification plant to produce methanol and ~300 kt/y capacity through modifications in existing. 3. Gross volume. It includes Repsol’s whole circular strategy: biofuels, circular chemical products and plastics and biogas production.
Low-carbon generation

Developing a competitive RES player with international platforms

Transition Financing Framework
Aligning Financing Policy with our Transition Strategy and Climate Roadmap

- Repsol has developed an overarching Transition Financing Framework (the “Framework”) defining a financing strategy to accompany our sustainability strategy, allowing the access to the financial resources needed for its implementation.

- Our aims have been (i) following all market guidelines and best practices and (ii) flexibility, to allow us to have access to all relevant transition financing instruments.

- Framework developed in compliance with the four key elements of the ICMA Climate Transition Finance Handbook 2020:
  1. Issuer’s climate transition strategy and governance;
  2. Business model environmental materiality;
  3. Climate transition strategy to be ‘science-based’: including targets and pathways; and,
  4. Implementation transparency.

- The Framework includes the following type of financial instruments:
  - Use of Proceeds Format: Green and Transition bonds/loans
  - Transition Sustainability-Linked bonds/loans

---

Transition Eligible Projects to be understood as the combination of pure Green Eligible Projects and/or Transition ones contributing to the objective to create a low carbon economy compatible with a Well-below 2° scenario.

Second Party Opinion: evaluation summary

Aligned with the ICMA Sustainability-Linked Bond Principles

Aligned LMA Sustainability-Linked Loan Principles

KPI selection
- Material to issuer’s business model from an ESG perspective

SPTs calibration
- Ambitious against issuer’s past performance
- Ambitious against sectorial peer group, when using metrics other than the KPI selected
- Currently not benchmarkable against an international standard

Implementation of the ICMA Climate Transition Handbook recommendations, with the exception of the recommendation for external verification*

Alignment with ICMA Green Bond Principles

Positive

Implementation of the ICMA Climate Transition Finance Handbook

*It currently cannot be verified whether the climate transition strategy is science-based as commonly established reference points to conduct such a benchmarking are currently not available for this sector. It is to be noted that Repsol is part of SBTI’s working group for developing such reference points for the Oil and Gas Sector.
Use of Proceeds Format (I): eligibility criteria

Eligible types of Investments

Repsol’s Eligible projects are primarily Capital expenditures but can also be (i) selected operating expenditures (such as maintenance costs that either increase the lifetime or the value of the Assets) of Physical Assets meeting the Eligibility Criteria and (ii) Research and development ("R&D") expenditures aiming at developing new products and solutions as per the Eligibility Criteria.

Lookback Period

The net proceeds of each Use of Proceeds Financing instruments will be used to (i) Finance Eligible Projects occurring post issuance of each financing instrument; and/or (ii) Refinance disbursements to Eligible Projects initiated up to 3 years prior to the year of execution of any Use of Proceeds Financing issuance.

See details of eligibility criteria in Appendix A.
Integration of ESG criteria in project management for responsible management of all activities, under the purview of our Sustainability Model, which is designed to prevent possible impacts to people, assets and the environment.

Formalized process of evaluation and selection of Eligible Projects.

A dedicated Sustainable Financing Committee in charge of Eligible Projects evaluation and approval for allocation, with biannual monitoring and potential allocation change if necessary.

Management of Proceeds

- Management of proceeds by the company’s Treasury, following the financial and risks internal policy of the Group pending allocation.
- Internal tracking procedures and register to monitor the Green Eligible Projects and Transition Eligible Projects have been established.
- Re-allocation of proceeds in case of asset divestment or cancellation of a project.
- Full allocation of proceeds within 36 months.

Reporting

**Allocation Reporting**

- Confirmation of proceeds eligibility;
- Total amount of proceeds allocated to Eligible Projects;
- Split per each category and breakdown by geographical region on an aggregate basis;
- Share of refinancing and financing proceeds;
- The remaining balance of unallocated proceeds.

**Impact Reporting**

- Annual report on adequate relevant impact metrics for monitoring the projects financed on an aggregate basis at Project Category level (see appendix A for potential reporting metrics).

Use of Proceeds Format (II): compliance with GBP
Repsol is setting new Carbon Intensity Indicator (CII) reduction goals to achieve net zero emissions by 2050.

Measures the CO2e emissions (according to GHG protocol) for every unit of energy that the company makes available to society.

The CII covers direct & indirect emissions (Scope 1 and 2) derived from:
- Upstream activities: exploration and production
- Downstream activities: refining and chemicals operations
- Low-emission power generation

And also includes the emissions derived from the use of products obtained from the primary energy mix that the company produces and supplies to society (Scope 3).

The accurate and transparent calculation of our greenhouse gas inventory is a critical input for our roadmap to reach net zero emissions by 2050.

Our methodology avoids undesired results, such as double counting of emissions, which would happen if the same emissions were attributed to more than one link in the production – refining – marketing chain. Furthermore, if the methodology for scope 3 emissions was based on the product sales, then oil production could be increased without an impact on the CII should the volume of marketed oil products is greater than oil production.

Calculated using the following formula:

Where:
1. **Operational Scope 1 + 2**: The direct (scope 1) and indirect emissions (scope 2) from Exploration & Production operated businesses world-wide, from Refining and Chemical industrial complexes in Spain, Portugal and Peru and from low-emission power generation.
2. **Scope 3 O&G E&P based**: The emissions associated with the use of products coming from Repsol’s oil and gas production (scope 3).
3. **Location-based emissions shift**: Emissions shift from fossil fuels mix due to low-carbon power generation and low carbon fuels.
4. **CCUS / NCS Negative Emissions**: Stored emissions if levers such as Carbon Capture, Use and Storage (CCUS) or Natural Climate Solutions (NCS) are implemented.
6. **Non-Energy Products**: Energy from the products obtained in our average Refining and Chemicals processes for oil case and all energy contained in the natural gas production.
7. **Low Carbon Energy Sources**: Energy from renewable (solar, wind, hydropower) and non-renewable (combined cycle gas turbines and surplus from natural gas cogeneration) power generation sources.
### Sustainability-Linked Format (II): SPTs

- **SPT 1:** 12% reduction in overall (scope 1-3) carbon intensity indicator **by 2025** against a 2016 baseline
- **SPT 2:** 25% reduction of carbon intensity indicator (scope 1-3) **by 2030** against a 2016 baseline
- **SPT 3:** 50% reduction of carbon intensity indicator (scope 1-3) **by 2040** against a 2016 baseline

### Historical Data
- 77.7 g CO2e/MJ in 2016 (base year)
- 73.8 g CO2e/MJ in 2020

### Ambition
Repsol’s ambition to achieve net zero emissions by 2050 entails directing all of its activities and investments to meeting new and more stringent plans all in alignment with the energy transition and the effort to limit the planet’s temperature rise to well below 2 degrees Celsius according to the Paris Agreement’s climate goals.

### Verification
The company’s external auditor will provide to bondholders a report with reasonable assurance at the Reference Date.
## Sustainability-Linked Format (III): SLBP & EMTN Programme

### SLBP Compliance & EMTN Programme

</tr>
</tbody>
</table>

Our EMTN programme was renewed on May the 7th, 2021 with the following new developments:

- Sustainability-Linked Bonds structure (Terms and Conditions Section 4: Sustainability-Linked Notes).
- Repsol Europe Finance S.à.r.l. (Luxembourg) as potential new issuer in the same conditions and guarantee scheme as Repsol International Finance, B.V. (Netherlands).
Framework Wrap Up
Final Remarks

➢ **Inclusive and flexible transition financing is needed** to enable the implementation of credible and ambitious energy transitions processes and the achievement of the decarbonization goals of the Paris Agreement.

➢ With this new Transition Financing Framework, **Repsol fully incorporates its sustainability roadmap into its financing strategy** and takes a key step forward in its commitment to become a net zero emissions company by 2050.

➢ **Repsol continues its leadership and commitment to sustainability.** A commitment that has been constant over the past 25 years: Repsol was the first company in the oil & gas industry to support the Kyoto Protocol and the first to announce in 2019 the ambitious target of achieving net zero emissions by 2050.

Prudent financial policy and Net Debt reduction

**Net Debt Reduction in 2020**

- 2020 Net Debt reduced compared to 2019 even in a negative macroeconomic scenario.
- Repsol was one of the few in its comparison group to achieve this goal in 2020.
- In March 2021, Net Debt in line with the end of 2020.
- **Gearing target set in the Strategic Plan**: 25%(*) on average through the cycle with a threshold of 30% in order to preserve our prudent financial policy and our current credit rating.
