Polyether polyols

**Alcupol®**
Flexible slabstock & moulding; rigid foams and CASE applications
We use our technology in the production of propylene oxide/styrene monomer (POSM) and new polyol developments.

The implementation of our technical solutions and our long experience in the polyol production since the ‘70s, allows us to offer outstanding products and services.

Our Technology Centre is a recognized innovation model in Europe. This leading site together with our continuous industrial developments have enabled us to become an international reference in the POSM sector.

These infrastructures, together with our highly qualified technical and development teams, always equipped with the latest technologies, guarantee our commitment with product innovation.
Our commitment with you

We work hand in hand at our customers’ sites to optimize product performance. We take into consideration the different standards and the specific requirements of each application.

Satisfaction

A polyether polyol portfolio, developed using proprietary technology, which offers a wide range of alternatives to meet the specific needs of its clients.

True partners

Where others only see a client we see a partner to keep improving. This is how our technical service turns into a competitive advantage to help you offer better solutions.

Expert team

Repsol has a highly specialised sales team present throughout Europe. Repsol gives a personalised customer care to every client in their own language and with a world leading technology in customer care.
Present throughout the energy value chain, the company employs 24,000 people worldwide and distributes its products in nearly 100 countries. Its customer-focused product and services portfolio meets all consumer needs of around 24 million customers, whether at home or on the move.

Repsol Campus, Corporate Headquarters in Madrid

LEED® Platinum certificate, awarded by the prestigious US Green Building Council (USGBC), for new buildings construction

With over 8 decades of experience, Repsol is leading the energy transition with its ambition of achieving zero net emissions by 2050.
Over 95 countries where we market our products

**Added value**
Repsol’s Chemicals Division, with a high degree of integration, focuses its strategy in the constant generation of value through differentiated products and services.

Repsol manufactures a wide variety of products, ranging from base petrochemicals to derivatives.

**Base petrochemicals**: ethylene, propylene, butadiene and benzene.

**Intermediate products**: styrene, propylene oxide, polyether polyols, and propylene glycols.

**Polyolefins**: polypropylene (PP) and PP compounds, both high and low-density polyethylene (HDPE and LDPE), metallocene linear low density polyethylene (mLLDPE), ethylene vinyl acetate (EVA) and ethylene butyl acrylate (EBA) copolymers.

Over 1,500 references
Repsol's Chemicals Division, with a high degree of integration, focuses its strategy in the constant generation of value through differentiated products and services.

We focus all our resources to reach our most important goal: to develop innovative solutions. Our Technology Centre in sync with our steady plant improvements and our development of Industrial Sites, has steered Repsol's leadership in POSM production. An international reference to offer you always the latest solutions.

Over 100 scientists and researchers working for you

Understanding your needs

At Repsol we are committed with the development of new products for our clients. We are in constant search of innovative solutions to meet all your needs. Our goal is to develop cutting-edge products to offer reliable and quality solutions to enhance your business. Due to this vision Repsol displays one of the widest ranges of polyether polyols in the market.

Over 45 years of experience in polyols

Over the years we have developed an integrated chemical business controlling all key factors of the value chain: research, development, manufacturing and distribution.

This unique vision enables us to understand our customers needs and requirements. A valuable experience that led us to build the first POSM plant in Europe in the early '70s. An insight that continues today to drive our search for excellence.

Polyether polyols for flexible slabstock & moulding

Polyether polyols for rigid foams

Polyether polyols for CASE applications
At Repsol, we believe in the circular economy and we run specific projects that minimize the environmental impact of our materials. To this end, we are committed to making our industrial processes increasingly efficient and reducing the carbon footprint of our polymers.

We have a specialized circular economy department dedicated to recycling post-consumer waste to drive development of new innovative materials with recycled content.

We use recycled plastics in critical applications, creating new markets for plastic waste and driving circularity by giving that waste a new use.

Our ambition is to recycle the equivalent of 20% of the polyolefins we produce by 2030 to support, in conjunction with the other initiatives in Repsol’s circular economy strategy, the goal we announced in December 2019: to reach net zero emissions by 2050.

To contribute to the company’s emissions neutrality goal, our chemicals business has launched its 3030 Plan, intended to cut our carbon intensity by 30% by 2030.

Advancing the circular economy and lowering carbon intensity in our chemicals business will contribute towards transforming Repsol’s industrial operations, as well as developing high-value-added raw materials, making it possible to manufacture an infinite number of products that improve human well-being, safety, and quality of life while enhancing the environment.
Solutions for the circularity of polyols

Repsol is positioned as one of the petrochemical companies with the highest commitment to sustainability, offering one of the most extensive circular products portfolios. The projects we develop allow for a production model with maximum optimization of resources and minimal waste generation. These technological solutions respond to the main social and environmental challenges.

With this new process, Repsol will produce circular polyols from recycled polyurethane foam, marketed under the Repsol Reciclex® brand.

Repsol plans the start-up for 2022 at its Puertollano Industrial Complex. It will be the first plant in Spain to recycle polyurethane foam, one of the most challenging plastic waste to treat at the end of its useful life.

Zero emissions commitment

We are the first company in the sector to set the net-zero emissions by 2050 goal. We will invest over 400 million euros until 2025 to reduce 800,000 tons of CO₂ and lay the foundations to transform industrial centers into net-zero emissions facilities.

Please [click here](#) if you wish to obtain further information.
We create innovative solutions and adapt them to each specific requirement.

We believe in quality and reliable products you can trust every time.

We know every request is different, that is why we offer a wide product range for a broad variety of applications:

- Polyether polyols for rigid foams
- Polyether polyols for flexible slabstock & moulding
- Polyether polyols for CASE applications

We believe in sustainable models. Polyols for rigid foams contribute to increasing energetic efficiency in buildings and electrical appliances by reducing CO₂ emissions.

We are a customer-orientated company. Always ready to listen to our customers’ needs.

Our new polyol development, with very low content of volatile organic compounds, strengthens our commitment with safety and sustainability.

* Contains an antioxidant that has been cleared by the FDA for use in food packaging and/or other applications as an indirect food additive

Present in modern coating materials, in vehicles, cables, floors, walls, bridges, roads... they insulate safely and effectively, improving their durability and appearance
Excellence is intrinsic to Repsol’s values. It infuses our daily work and helps guide our decisions and actions, contributing to achieve the commitment made to our customers, stakeholders, employees, suppliers / partners and society to build a better future.

Safety is our priority

Petrochemical complexes, packaging facilities and logistics centres all have the ISO 45001 certification for their rigorous safety measures.

ISO 45001

Technical Data Sheets and MSDS are available on: www.repsol.com

A global company that seeks the welfare of people and is a step ahead in building a better future through the development of smart energy
Quality

All petrochemical plants are compliant with the current ISO 9001 standards, for the quality of processes from manufacture to distribution, transport management and end product warehousing.

**IATF 16949 certified**

In 2021 we have obtained the highest certification for our auto products, having adapted all our automotive materials production centers under the IATF 16949 standard, an international standard for quality management systems in the automotive industry. This standard is the most demanding for quality management systems in the automotive sector at an international level and one of the essential requirements that car manufacturers require from their suppliers.

The **IATF 16949** is the most demanding international standard for quality management systems in the automotive sector and one of the essential requirements for their suppliers.
Environment

We set up and deploy ambitious CO₂ program reduction, called Plan3030, that pursues a 30% reduction in our carbon intensity indicator. Energy efficiency programmes to reduce energy consumption and GHG emissions as one of the key elements of our strategy.

These programmes pursue long term targets which have been made public in order to facilitate their progress by the stakeholders. In this sense, Repsol Química is committed to a reduction of 0.26 million tonnes per year of GHG emissions in 2021-2025 Strategic Plan and 0.7 million tonnes per year reduction until 2030 with a roadmap to be a net zero business sooner than 2050.

All petrochemical complexes have ISO 14001 certification for their environmental management and the reduction of the impact of their facilities; and ISO 14064 for the annual verification of greenhouse gas (GHG) emissions.

The chemical area of our complexes in Tarragona (2015), Puertollano (2013) and Sines (2016), has implemented an Energy Management System according to the requirements indicated in the International Standard ISO 50001. This system is dedicated to developing and implementing our organization’s energy policy, as well as manage the energy aspects of our activities, products or services. The objective is to increase and improve our energy efficiency, based on systems’ implementation aimed at continuous energy performances improvement and thus contribute to a more efficient and sustainable use of energy.

Repsol purpose is to become a net zero emissions company by 2050, and our 2021-2025 Strategic Plan enables us to continue successfully advancing our multi-energy commitment.
