Advanced materials
Repsol. A global multi-energy company

Over 8 decades of experience in the world of energy

One of the largest energy companies worldwide and one of the biggest private oil & gas companies.

Repsol is committed to our customers’ global strategy putting our entire organization at their disposal to achieve a common goal: to create long-term relationships which enable us to rise to the common challenges our business presents.

Over 90 countries where we market our products

Repsol has a diverse workforce of over 25,000 employees, marketing products in over 90 countries and reaching 10 million customers. Repsol’s highly integrated Chemical Division focuses its strategy on the continuous generation of value through differentiated products and services.

LEED® Platinum certificate, awarded by the prestigious U.S. Green Building Council (USGBC), for new buildings construction

Chemicals
Over 1,500 references
Repsol manufactures a wide variety of products, ranging from base petrochemicals to derivatives

Base petrochemicals: ethylene, propylene, butadiene and benzene.

Intermediate products: styrene, propylene oxide, polyether polyols, and propylene glycols.

Polyolefins: polypropylene (PP) and PP compounds, both high and low-density polyethylene (HDPE and LDPE), metallocene linear low density polyethylene (mLLDPE), ethylene vinyl acetate (EVA) and ethylene butyl acrylate (EBA) copolymers.

Over 100 scientists and researchers working for you
Including qualified personnel specialised on Product Stewardship.
Repsol's commitment to R&D is an evidence of the company's aim to attain business excellence to meet future horizons.

Added value
Repsol's Chemicals Division, with a high degree of integration, focuses its strategy in the constant generation of value through differentiated products and services.
We revolve around our customers and we innovate with them in mind

Repsol advances in its commitment to innovation by developing new materials for 3D printing. The new range encompasses three materials that cover the primary needs of the FDM application and are available in pellet format.

Food contact grades

Our polymers meet most relevant EU and FDA regulations

Excellence is intrinsic to Repsol’s values. It infuses our daily work and helps guide our decisions and actions, contributing to achieve the commitment made to our customers, stakeholders, employees, suppliers, partners and society to build a better future.
The new Repsol 3D printing FFF and FGF grades have been specifically developed to cover the highest requirements of the sectors that use filament technology FFF [Fused Filament Fabrication, also known as FDM] and FGF [Fused Granular Fabrication], and stand out for their excellent mechanical properties, processability, and stability.

Recommended printing settings

The Repsol P3D630FV is chemically coupled fiber–glass reinforced compound specifically indicated for applications that require excellent impact resistance, high rigidity, and low deformation and contraction behavior in which the main requirements are:

- Very high stiffness
- Good impact strength
- Low warpage and shrinkage behavior
- UV stabilization for outdoor applications

Repsol P3D630FV is suitable for technical pieces, functional prototypes, jigs, and fixtures for the automotive sector, among others.

The Repsol P3D820FM with mineral fillers is a reinforced polypropylene with medium melt flow rate, that offers high rigidity and very high dimensional stability and warping control maintaining a good level of impact and an optimal surface appearance. It contains UV stabilization and excellent scratch resistance, making it ideal for outdoor use.

Repsol P3D820FM is suitable for prototyping, tools, toys, footwear, automotive components, jewelry, and entertainment.

The Repsol P3D800F is a nucleated grade with excellent impact resistance designed for FDM technology. It provides high stability to the constructed parts such as:

- Automotive: prototypes, aesthetic parts, specific tools, etc.
- Aerospace: prototypes
- Technical components: toys, textiles, footwear, jewelery, leisure, etc.

Repsol P3D800F is specially indicated when main requirement is mechanical strength with good processability and aesthetic properties.

Repsol P3D750FM with mineral fillers reinforced and medium melt flow rate shows excellent stiffness/impact balance and good processability and stability.

Repsol P3D750FM is suitable for prototypes, tools, toys, jewelry and leisure.
The Repsol P3D800FG grade is a high-performance thermoplastic with a fluidity of 20 g/10 min, low density, high elasticity and high resistance to fatigue.

- Excellent flow properties
- Excellent processability and stability
- High impact strength
- High stiffness

The Repsol P3D800FG mechanical properties make it an ideal material for 3D-printing applications which have to endure high stress or strain.
3D printing FFF and FGF Technology

Repsol P3D800FG

The P3D800FG grade is a high-performance with a fluidity of 20 g/10 min, low density, high elasticity and high resistance to fatigue.

Applications:
- Prototypes
- Technical components
- Specific tools
- Toys
