

REPSOL DEVELOPS A COMPLETE RANGE OF PHTHALATE-FREE POLYPROPYLENE

- Repsol offers a complete range of phthalate-free polypropylene (PP) in all its production centers since last September.
- In this way, Repsol has become one of the companies leading the transition towards products free of substances with specific migration limits, such as phthalate.
- Repsol has carried out this transition jointly with its clients to ensure that it does not affect their conversion processes.

Since last September, Repsol has a complete range of phthalate-free polypropylene (PP) in all of its production centers. The company began its commitment to offer the market a range of phthalate-free polypropylene in 2009 through collaborations with clients in non-woven hygiene applications, leaders in the "personal care" sector. Thus leading this market transition.

Repsol has cooperated during this process with its clients to ensure that the transition from traditional PP products to phthalate-free grades would not impact their conversion processes.

Thanks to its prior non-woven sector experience, Repsol is now extending the use of phthalate-free catalysts to all its processes, responding to the consumer market general trend. These phthalate-free products are an indispensable requirement in many applications for our leading customers in the hygiene and food sectors.

Repsol is leading the transition towards products free of substances with specific migration limits, such as phthalate.

Repsol's range of phthalate-free PP has been progressively expanded after the announcement, in November 2015, of its commitment to eliminate phthalate from all its products. In this way, Repsol has become one of the companies leading this market change.

This represents a new advancement in its Naturep project, whose ambition is to eliminate those substances with specific migration limits from all its products, anticipating society's demands. Repsol thus strengthens its product portfolio and provides greater value to its customers by ensuring its commitment to food safety, product differentiation, and specialties in an increasingly demanding end market.

100% phthalate-free polypropylene

Indispensable requirement for the hygiene and food sectors
