

REDEZON 511-P

RUBBER WAXES

Specialties

Description

The product Redezon 511-P is a mineral wax derived from petroleum that acts as a physical antiozonant in unsaturated rubber mixtures.

Applications

Specially recommended for technical rubber products or tyre manufacturing.

Redezon 511-P migrates to the rubber surface forming a thin layer protecting as an outstanding physical barrier against the ozone attack to the double bonds of the rubber structure.

The specially designed carbon distribution of the Redezon 511-P makes it recommendable for tyre manufacturing giving full protection under mild and warm climate conditions.

It is specially formulated in order to avoid caking so it can be used for long periods under appropriate storage conditions.

Technical characteristics

	UNIT	METHOD	VALUE
Melting point	°C	ASTM D 127	83,0 – 87,0
Viscosity at 100 °C	cSt	ASTM D 445	7,5 – 11,0

Carbon distribution

Presentation

The product Redezon 511-P is packaged in 25 kg bags.

Do not store at temperatures above 40°C, and avoid moisture and direct sunlight.

The product should be used within two years of being packaged.

Unless indicated otherwise, the values of this technical datasheet must be considered as typical values
