REPSOL GETS “GOLD CLASS” RATING FOR SECOND CONSECUTIVE YEAR

- **Repsol is one of five “Gold Class” companies out of 109 surveyed in the oil and gas industry, and one of nine Spanish companies to receive the top rating.**
- **The Sustainability Yearbook 2009 rewards companies for good performance in corporate social responsibility and sustainability.**
- **The company was lauded for its strategy to combat climate change and its relationship with communities.**
- **Repsol stands out for its management of health and safety in the workplace, transparency, human development and biodiversity.**

Repsol YPF has received the “Gold Class” company rating for the second consecutive year in the Sustainability Yearbook 2009 compiled by PricewaterhouseCoopers and Sustainable Asset Management (SAM), an independent company which conducts the annual assessments for the Dow Jones Sustainability Index. The publication includes companies with the best performance on sustainability and corporate responsibility.

The company, chaired by Antonio Brufau, is ranked among the five “Gold Class” companies of the oil and gas industry, in recognition of Repsol YPF's commitment to seeking long term value creation. The ranking validates Repsol's strategic goal of seeking oil and gas offshore in deep water.

SAM analyses companies based on economic, environmental and social criteria, where Repsol stood out for its strategy to combat climate change and its relationship with communities, as well as health and safety management in the workplace.

The Sustainability Yearbook 2009 is one of the most prestigious publications on these subjects worldwide. Each year the world's largest 2,500 companies are invited to take part to find the best 367 in terms of sustainability and corporate responsibility.
