

Presented by Marc Márquez and Dani Pedrosa
during the Valencia Grand Prix

REPSOL LAUNCHES ITS NEW RANGE OF LUBRICANTS, 'REPSOL MOTO', DESIGNED WITH MOTOGP TECHNOLOGY

- **All the knowledge of the 20-year partnership between Repsol and Honda in the MotoGP World Championship has gone into the product, which was developed in the Repsol Technology Centre.**
- **Marc Márquez and Dani Pedrosa, Repsol Team riders, attended the presentation which was held during the Valencia Grand Prix.**
- **'Repsol Moto' will meet all its customers' needs, having been classified as top quality in the most demanding certification processes.**

Repsol has presented 'Repsol Moto', the new range of lubricants that is already available to purchase. The event was held during the Valencia Grand Prix leg of the MotoGP World Championship, at the Ricardo Tormo circuit in Cheste, and was attended by the MotoGP World Champion, Marc Márquez, and his Repsol Honda team-mate, Dani Pedrosa.

The Repsol riders are the lead ambassadors of 'Repsol Moto', a product which was given a trial by fire in the MotoGP World Championship. It passed this test and helped Márquez to win the world title for the second consecutive season, a season during which he has broken record after historic record.

Antonio Portela, Repsol Director of Lubricants, Asphalts and Specialised Products was in charge of the 'Repsol Moto' presentation.

'Repsol Moto' was designed with the most advanced technology on the market and developed in the Repsol Technology Centre in Móstoles, Spain. The team of scientists who worked on it have been involved at every stage in the evolution of the lubricant oil used in the Repsol Honda team's official engine, experience which has

led to the range of products that is now available on the market. Repsol and Honda celebrate the 20th year of their alliance this season, the most successful alliance in the history of the World Championship.

With this launch, Repsol's range of synthetic, semi-synthetic and mineral lubricants covers the needs of all its customers, whether they ride competition bikes, off-road bikes or scooters, with two-stroke or four-stroke engines. All the 'Repsol Moto' products pass the JASO and API certification processes with the highest classification in both, guaranteeing the protection of the engine and improved gear shift and clutch performance.

The packaging is also new: it retains the characteristic orange of the Repsol Honda team but employs different-coloured labels for each of the lubricants in the range, so customers will be able to easily choose the best product for their motorbike:

Coal red for racing products.

Dark blue for fully synthetic products.

Light blue for synthetic blend products.

Green for premium mineral lubricants.

Orange for all other mineral lubricants.

Yellow for two-stroke engines.
