

2020 Green bond GHG emissions avoided note

By June 2021, Repsol has verified the pending GHG emissions contributing to the avoidance of 1.2 millions of tons of CO₂e, achieved through the investment of M€534 in projects selected in accordance with Repsol's Green Bond Framework. Particularly, avoided GHG emissions verified in 2021 amounted 60,602 tCO₂e. The decrease with respect the 85,114 tons of CO₂eq estimated in the Final Green Bond Report has been due to longer shutdowns at the facilities of the Company as a result of COVID 19, which has prevented reaching the maximum CO₂e emission reduction. Thus, the final GHG emissions avoidance amounts 1.2 millions of tons of CO₂e.
