INTRODUCTION

When you choose Repsol Lubricants, **you are choosing much more**. As well as a high-quality product, you’ll get the Repsol guarantee: an integrated global energy company which carries out exploration, production, refining, distribution and marketing activities in more than 80 countries. Repsol provides millions of people and companies all over the world with the most efficient, responsible and innovative energy solutions.

You’ll also get **maximum innovation**. Repsol has a Technology Centre at the global forefront of R&D&i, where our technicians and researchers are continuously improving each product to ensure maximum efficiency and the highest level of technical and environmental quality.

In a sector such as the mining and oil industry, new technological advances are being introduced every day. Repsol is therefore working to develop a wide range of industrial lubricants and to this end is making every effort in terms of resources, research and technology.

At Repsol we have a wide range of industrial lubricants that comply with the most stringent quality standards. This is the only way we can ensure that your machinery and equipment is perfectly lubricated and protected, thereby enhancing its functions, improving its performance, contributing to energy savings and extending its useful life.

**Repsol Lubricants are the best solution for your machinery and equipment.**

In this catalogue we have selected the most popular products in the sector. However, Repsol has a wide range of other products at your disposal. For more information please see our catalogues at [repsol.com](http://repsol.com)
The challenges faced by mining equipment today are ever greater and take many different forms. This is partly due to the demands of production, which requires the full availability of equipment often used at full capacity. However, it is primarily the result of the extreme environments in which the equipment operates (high level of contamination with aggregates, the presence of water, the nature of the raw materials, etc.).

Under these extreme operating conditions, in addition to their usual functions lubricants must also provide additional protection in order to maintain or improve equipment reliability and availability, as well as facilitating maintenance management. With their extensive experience in these types of applications, Repsol Lubricants have shown that they can meet these challenges and provide a high performance level, thereby ensuring that equipment is fully available to customers.

The Repsol Lubricants range is designed to cope with extremely demanding operating conditions: greater resistance to rust (higher operating temperatures), lower viscosity loss (use of higher quality bases), greater anti-wear capacity (developed on a bespoke basis), etc. offering a high level of resistance in this operating environment.

In addition to the state-of-the-art technology used by Repsol to manufacture the lubricants, its extensive experience in the field and the data obtained from the analysis of thousands of samples also provide valuable information. This information is taken into account in the development and adaptation of its range of lubricating oils, and has made a significant contribution to the excellence of its products.
In a sector where new technological advances are being introduced every day, Repsol carries out **constant research** in order to offer a wide range of lubricants which are adapted to the specific needs of each of our customers.

As well as complying with the **most stringent quality standards**, the exclusive formulation of our products provides perfect lubrication and maximum care for the engine, guaranteeing the maximum performance and duration of these systems.
REPSOL DIESEL TURBO UHPD MID SAPS 10W40

High-quality UHPD (Ultra High Performance Diesel) synthetic technology lubricating oil. Its name (mid SAPS) highlights its reduced ash content, which prevents the obstruction of systems that include particle filters, as well as protecting catalytic after-treatment systems and minimising polluting emissions. Its excellent composition makes it a long-life lubricant with extraordinarily long periods between oil changes. It is compatible with all kinds of fuels (diesel, LPG, CNG and biodiesel) and its characteristics make it the ideal oil for mixed fleets. It is valid for Euro 6 engines and older.

REPSOL DIESEL TURBO UHPD URBAN 10W40

State-of-the-art synthetic lubricating oil particularly recommended for supercharged diesel engines of commercial vehicles with extraordinarily long periods between oil changes. Product specifically designed for low-emission Euro 5 diesel engines and some Euro 6 engines.

High-quality synthetic technology lubricating oil. Its name underlines its suitability for turbocharged engines and its low ash content [mid SAPS], which prevents the obstruction of systems that include particle filters, as well as protecting catalytic after-treatment systems and minimising polluting emissions. It is compatible with diesel and biodiesel and without doubt plays a fundamental role in the lubrication of mixed fleet engines. It is valid for Euro 5 engines and older.

THPD (Top High Performance Diesel) lubricating oil which optimises the performance of the most demanding latest-generation heavy-duty diesel engines. It has been specifically designed for engines requiring lubricants which meet the ACEA E7 and API CI-4 quality standard, and its viscosity and composition means that the periods between oil changes can be extended, always according to the manufacturer’s recommendations. Its modern formulation gives it magnificent anti-wear properties, protecting the turbocharger in particular. It is compatible with biodiesel and systems equipped with an EGR valve and SCR catalytic converters and is valid for Euro 5 engines and older.

**REPSOL DIESEL TURBO THPD 15W40**

Monograde lubricating oil produced from highly-refined bases. It includes especially selected additives which improve aspects such as its resistance to rust and anti-wear properties, as well as giving it a high level of detergent/dispersant power. Its composition makes it suitable for turbo-charged or naturally aspirated diesel engines working in severe conditions. This oil is particularly suitable for the lubrication of Detroit Diesel two-stroke engines. It can also be used in transmissions and torque converters.

- API CF-2/CF/SJ, Special Detroit Diesel Series 149.
Repsol hydraulic oils are formulated with carefully selected and refined bases. As a result, they provide all parts of your machinery and equipment with the robustness and reliability they require, even in extreme operating conditions.

Their excellent anti-wear characteristics, together with their anti-rust and anti-ageing properties, corrosion protection and outstanding water separation, put them at the forefront of lubricating oil technology today.

Repsol also has a wide range of hydraulic oils so that you can choose the best one for your industry, including everything from conventional oils with zinc-based additives to the latest “ashless” oils and specific applications which require a fire-resistant fluid.

And all this with Repsol’s commitment to sustainability and the environment through the use of biodegradable fluids.
### REPSOL TELEX HVLP

Hydraulic oil for use in hydraulic circuits subjected to different changes of temperature, weather or very low operating temperatures. It is also very suitable for hydraulic systems used in marine applications.

### REPSOL LIBRA HIDRAÚLICO HLP

Hydraulic oil formulated with a mixture of mineral bases and high-quality regenerated bases, suitable for use in circuits with severe anti-wear requirements. This range of products illustrates our commitment to sustainable development, as it completes the ecological chain in the production, use, collection and recycling of lubricants.

<table>

TRANSMISSION OILS

Our lubricants meet the most stringent quality standards, and the exclusive formulation of our lubricants provides perfect lubrication and maximum care in demanding lubrication systems such as transmissions subjected to high loads.
REPSOL TRANSMISION FD-1 60

Oil which is particularly recommended for axles and final drives of CATERPILLAR machinery which require the use of oil without friction modifiers and meet the CAT FD-1 specification (FDAO: Final Drive Axle Oil). This oil significantly improves the performance and the useful life of machinery in comparison with those that comply with the CAT TO-4 standard.

High-quality monograde mineral lubricant produced with highly-refined bases, to which especially selected additives are added to improve aspects such as its resistance to rust, anti-wear and detergent/dispersant power, thereby ensuring that it has a long service life. It can be used as a hydraulic fluid in public works machinery, as well as in transmissions for which the manufacturer recommends this grade of viscosity.

Repsol has designed a full range of lubricating oils to overcome the technical challenges of the wide variety of industrial gearbox applications.

**Repsol Super Tauro mineral oil**, with its excellent anti-rust, anti-corrosion, demulsifying and anti-foaming properties, together with its high load capacity, provides superior results in industrial gears subjected to severe operating conditions.

**Repsol Synthetic Lubricants**, which make it possible to extend the periods between oil changes, leading to savings on maintenance costs, are recommended for systems whose operating conditions reach extreme temperatures.

The range is completed by an oil especially designed for systems that experience a phenomenon known as “micropitting”, which appears in gears that are subjected to high cyclic loads and frequent stops and starts.
Repsol Super Tauro PAG

High-performance synthetic lubricant for systems where very high resistance to rust and load capacity are required. Exceeds Flender requirements.

COMPRESSOR OILS

At Repsol we know that the reliability and efficiency of air compression, process gas, refrigerant gas and vacuum pump systems is crucial to the smooth running of your facilities. Selecting the right lubrication is therefore an essential part of maintenance systems.

With this in mind, we have designed a range of high-quality lubricants. Repsol lubricating oils are formulated with highly-refined bases and the latest additive technologies. They therefore meet all the requirements of the different types of compressors on the market.

The Repsol range of lubricants includes highly-refined paraffinic oils for normal working conditions, as well as other long-life synthetic oils for compressors operating in more severe conditions.
REPSOL SINTÉTICO THOR

An ester-based synthetic lubricant recommended for the lubrication of reciprocating and rotary compressors operating in severe working conditions which require maximum oil service life.

GAS ENGINE OILS

REPSOL LONG LIFE GAS 4005

A very long-life lubricating oil which includes hydrogenated bases and the latest generation of additives, enabling the period between oil changes to be extended in comparison with traditional gas cogeneration-based mineral oils. Suitable for modern stationary gas motors that use natural gas as fuel and require the use of oil with a maximum ash content of 0.5%. Its well-balanced formulation enables it to withstand the rust and nitration present in these types of engines, which operate in severe conditions, much better than conventional lubricants. In applications where the gas used as fuel is biogas or any another type of gas, the useful life of the lubricant will depend on the level of contaminants in the gas.

REPSOL SUPER MOTOR GAS 4005

A very long-life mineral lubricating oil which is particularly suitable for meeting the lubrication requirements of modern stationary gas motors that use natural gas as fuel. It contains a maximum ash content of 0.5%, minimising the formation of deposits and guaranteeing maximum performance and operation time. It enables the periods between oil changes to be extended, thereby minimising maintenance costs.

LUBRICANTS FOR THE MINING AND OIL INDUSTRY

**Ethylene glycol-based engine coolant formulated with fully organic inhibitors, ensuring that it provides excellent protection against corrosion in all metals, particularly aluminium and other light alloys present in engine cooling circuits. Although it can be used in all types of cooling circuits (aluminium, copper, cast iron) it is particularly recommended for high-pressure aluminium engines where protection at high temperatures is very important.**

**REPSOL ASTRA**

A fluid for the lubrication of drills, hammers and pneumatic tools in severe working conditions, as well as pneumatic mechanisms which require a fluid with the capacity to capture water drops, ensuring that they do not come into contact with metal surfaces (demulsifying test values of 0-0-80 at 30 minutes).

**QUALITY LEVEL**

In order to guarantee excellent performance from your machinery, Repsol offers high-performance lubricating greases. This full range covers the needs of the most diverse industrial sectors.

It is possible to select everything from multi-purpose greases, which meet the lubrication requirements of the majority of facilities, to special products designed to work in conditions which are highly demanding due to the loads, temperatures or environmental contamination. Compliant with the most stringent quality standards, the exclusive formulation of our greases provides excellent performance in all types of machinery, extending its useful life and providing extra reliability. This makes the Repsol range of greases the best investment for your company.
Extreme-pressure greases

REPSOL LÍTICA EP

Grease for all types of bearings that withstand loads and vibrations (steel, rolling, mining, public works machinery), couplings, chains, guideways, shear bearings, rolling mills (chocks, bearings, brackets, etc.).

ANALYSIS OF OIL IN SERVICE

At Repsol we know how important it is to ensure that your machinery and systems work in the best possible conditions. It is therefore essential to ensure that they are adequately lubricated.

The **ADOC programme** is an exclusive service we offer our customers which is based on more than 20 years’ experience in the analysis of lubricants. Through the periodic analysis of a sample of oil in service in our laboratory, the ADOC programme tells you the condition and performance of your machinery and systems, whilst predicting any mechanical failures before they occur.

**Advantages of the ADOC programme:**

- Improves the performance and productivity of your equipment.
- Reduces maintenance costs and unscheduled stoppages.
- Extends the useful life of lubricants and mechanical components, thereby minimising the associated replacement costs and the capital tied up in replacement parts.
- Enables maintenance and control activities to be scheduled.
- Leads to a significant improvement in the optimum working conditions of lubricants and components.

Other services:

- **Technical assistance**
  Our team of technical specialists is available to offer you advice in your factory and provide specialised training in lubricants.

- **On-site assistance services**
  We offer an expert recommendation on the best lubrication practices, improvement of lubrication performance, selection of samples and resolution of machinery-related problems to help extend the useful life and efficiency of your machinery.

- **On-site lubrication services**
  We take care of everything necessary to ensure that the lubricants are not a cause for concern for customers, offering lubricant application services, warehouse management, sample taking, collection of used oil, etc.

- **Development of bespoke lubricants for the resolution of specific problems**
