

AVGAS 100LL Filtration process

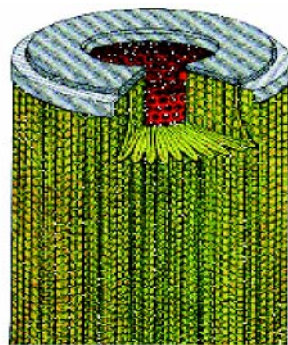

We care about the fuel that enters the aircraft must be clear, bright and free of solid particles in suspension and undissolved water at normal room temperature, it must also be free from surfactant additives and microbiological contaminants.

AVGAS 100LL has some specific filtration needs due to the different characteristics of this product:

It is important to clarify that water and **AVGAS 100LL** have very different densities. Water decants with ease and its elimination by filtration is not necessary.

Particle filter:

MICROFILTER CARTRIDGE
